"Make Just One Change: Teach Students to Ask Their Own Questions" by Dan Rothstein and Luz Santana is a book centered around the concept of the Question Formulation Technique (QFT). The authors argue that teaching students to formulate their own questions can significantly enhance their critical thinking, curiosity, and engagement in learning.

The main takeaway of the book is that by empowering students to ask their own questions, educators can shift the dynamic of the classroom from passive learning to active participation. This approach fosters a sense of ownership over the learning process and encourages students to explore their own interests and inquiries.

Through practical strategies and real-world examples, Rothstein and Santana demonstrate how the QFT can be implemented across various subjects and grade levels. By guiding students through the process of asking questions, educators can promote deeper understanding, encourage independent thinking, and cultivate lifelong learners.
